

ABSTRACT OF THE DISCLOSURE

A halogen work light with a spare bulb container integrally attached thereto is disclosed. The spare bulb container includes a tubular body and a support piece that fits inside the closed end of the tubular body and an end piece that friction fits into the open end of the tubular body. The support piece and end piece both include a longitudinal hole for receiving the ends of a spare halogen bulb and holding the bulb in a suspended position inside the tubular body. Both the support pieces are formed of a soft, resilient material, such as rubber.
